

I support all actions to make all VRS services interoperable. We use our video phone at home for all purposes, both outgoing and incoming calls. We often find our calls blocked when we are trying to call friends who use a different provider. It is very frustrating and time consuming. My deaf husband feels his time is being wasted. His 3 deaf kids are very disappointed that they can't call their friends using another company. Please require that all systems be compatible and in accordance with the intentions of the ADA and FCC access rules.
